Nonlinear Fracture Mechanics

1990. 226 figures. V, 451 pages.
Soft cover DM 115,-, öS 805,-
ISBN 3-211-82246-1

The text deals with the theoretical and applied aspects of Nonlinear Fracture Mechanics as seen from the frontier vantage point of recent research where both Mechanics and Physics overlap. Written by the U.S. and European researchers of established international reputation, the book has been edited by Michael P. Wnuk, a Professor of Engineering Mechanics at the University of Wisconsin-Milwaukee, a Fulbright Scholar and Life Member of the New York Academy of Sciences.

No. 315:

A. Kluwick (ed.)

Nonlinear Waves in Real Fluids

1991. 159 figures. V, 334 pages.
Soft cover DM 102,-, öS 714,-
ISBN 3-211-82277-1

Real fluids have proven to represent a rich source of new, unexpected and even of previously thought impossible phenomena. The present volume is intended to provide an overview of these phenomena including both physical and mathematical aspects which may be of importance for the development of new technologies in many engineering areas.

No. 316:

G. Creazza, M. Mele (eds.)

Advanced Problems in Bridge Construction

1991. 243 figures. VI, 296 pages.
Soft cover DM 98,-, öS 686,-
ISBN 3-211-82318-2

The volume collects the lecture notes of a course held at the Department of Structural Engineering and Geotechnics of the International Centre for Mechanical Sciences dealing with the most and modern topical problems of bridge design.
The topics presented allow to tackle both theoretical-analytical as well as technical-constructive aspects of the design problem.
The emphasis is mostly on the ones still in an evolutionary phase, that is long span suspended/stayed bridges and cantilever built bridges with prefabricated segments.

No. 317:

F. Casciati, J. B. Roberts (eds.)

Reliability Problems: General Principles and Applications in Mechanics of Solids and Structures

1991. 80 figures. VI, 271 pages.
Soft cover DM 82,-, öS 574,-
ISBN 3-211-82319-0

Recent advances in reliability theory, and the incorporation into design methodology and decision making processes, are treated. The book will be of value to researchers concerned with the development of reliability techniques and to practising engineers, wishing to apply advanced reliability assessment techniques in the fields of offshore technology, acrospace design and disaster prevention in civil and mechanical engineering.
